Ad Hoc Network Setup Instructions

WINDOWS XP ____________________________________________ 2
WINDOWS VISTA ______________________________________ 9
WINDOWS 7 ___________________________________________ 12
MAC OSX _____________________________________________ 16
Windows XP
If you are connected through an Ethernet cable, please continue to the next step. If you are connected to the Internet only over your wireless connection, please disconnect from your wireless infrastructure network now.

1. From the “Start” menu click Control Panel.
2. Under Pick a category, click “Network and Internet Connections”.

3. Under or pick a Control Panel icon, click “Network Connections”.

4. Right-click your wireless network connection, and then click “Properties”.
5. In the Wireless Network Connection Properties dialog box, click the “Wireless Networks” tab.
6. On the Wireless Networks tab, under Preferred networks, click the “Add” button.
7. In the Wireless network properties dialog box, in the Association tab, type the name of your Ad Hoc wireless network in the Network name (SSID) box (shown in step 10). For example, you could name your wireless network “MyHomeNetwork”.

8. Uncheck “The key is provided for me automatically” check box and select the “This is a computer-to-computer (ad hoc) network” check box.

9. Create a 13-digit password and type it in both the Network key and Confirm network key boxes. For the best security, include letters, numbers, and punctuation. Then click “OK”.

7
10. Click “OK” again to save your changes.
Windows Vista

1. Click the “Start” button and then the “Connect To” option
2. Click the “Set up a connection or network” link

3. Click the “Set up a wireless ad hoc” option
4. From the **Security Type** drop down menu select “WEP”. Provide a network name and password. Be sure to select the **Save this network** check box so it is available for you to activate next time. Click the “Next” button.
Windows 7

1. Click on the ‘Start’ button and then the “Control Panel” option
2. Click the “Network and Sharing Center”

3. Click the “Set up a new wireless connection or network” option
4. Scroll to the bottom of the window and Click “Set up a wireless ad hoc (computer-to-computer) network”. Click the “Next” button.

5. Click the “Next” Button
6. From the **Security Type** drop down menu select “WEP”. Provide a network name and password. Be sure to click on ‘Save this network’ so it is available for you to activate next time. Click the “**Next**” button.

![Network Configuration Screen]

7. Once your Ad Hoc network deploys, you will be presented with the screen below. Click the **“Close”** button.
**Mac OS X**

1. Select the Wireless network icon on the Apple Menu Bar.

2. Select ‘Create network’

3. Enter your new wireless network name and password and Click “OK”.
